

7 challenges for a smarter city

We are looking for sponsors!

WHAT IS IT?

We are bringing together the local hacker/maker community and the city administration to explore new ways of solving problems of our city with the help of open networks and civic tech.

Seven challenges gathered from real needs of different departments of the City of Zurich will be presented to the community with the goal of finding innovative IoT solutions based on technologies that leverage participatory citizen engagement.

Make Zurich is a community event organized by Stadt Zürich and Open Network Infrastructure Association:

Stadt Zürich

**open network
infrastructure
association**

Open Network Infrastructure Association promotes the deployment of **The Things Network** Switzerland: a community-operated network based on a technology called LoRaWAN that is ideal for Internet of Things applications thanks to long range connectivity and low power requirements for clients.

WHEN AND WHERE?

The challenges will be presented on June 22nd followed by a hackathon **on Friday 29th & Saturday 30th June 2018** at **Unterwerk Selnau**.

HOW TO TAKE PART?

We are looking for sponsors to help us make this happen. There are several options to participate:

Financial: choose among packages starting at CHF 1000.- and get your name in front of some of the most savvy audiences in Switzerland - and gain recognition for supporting independent tech community events!

Hardware: providing sensors and electronic components that can be used to solve the challenges is a great way to support the event and expose your brand to the community.

Expertise: if you have deep expertise in a field that can help provide solutions for the challenges, it is possible to participate as coach/advisor.

Your brand will be featured on the marketing material of the event and mentioned in social media.
